

E 210: Environmental Policy

As Chartered Building Surveyors we will help our clients better manage the long term environmental impact of their buildings as well as demonstrate high levels of environmental awareness in our own practise.

We will ensure that, balanced with the business requirements, we will set environmental objectives for each project that we undertake and in addition we have set our own environmental objectives for our business which we monitor annually.

We are committed to the protection of the environment which includes the prevention of pollution and ensure that on all projects and in our own business we consider sustainable resource use, climate change mitigation and adaption and the protection of biodiversity and ecosystems.

We will maintain a legal register covering all legislation with which we believe we need to comply with and carry out a compliance review where ever there are significant changes as well as annually.

This policy will be reviewed annually communicated to our staff and contractors as well being available on our website.
